

# Your cyber security shield for the maritime world

Cyber security has become an important subject in the maritime world. Always-on connectivity and the nature of increasing data demand through digitalisation efforts turn a vessel into a potential target. World-Link Communications is introducing ShipSecure to protect your assets at sea. Powered by CISCO, ShipSecure provides the platform to address the challenges posed by cyber threats. ShipSecure fully integrates with any mobile satellite communications and IT/OT infrastructure onboard and operates independently.

## Real-time management of attack

## Ready for the IMO regulations 2021?

Ship Secure provides the foundation to comply with the IMO guidelines in regards to the maritime cyber risk management (MSC-FAL.1/Circ.3)

### IMO Guideline Elements

Identify	ShipNet	Continuous assessment of the vessel network through the Vulnerability Management System (VMS)
Protect	ShipGuard	Enhanced network protection through next-generation firewall (NGFW)
Detect	ShipGate	Real-time intrusion detection and prevention (IDS/IDP) from the cloud
Respond	ShipGuard	AntiMalware Protection (AMP) for the End Point
Resolve	24/7 SOC	Detailed Log and Incident Analysis
